

# Copper Installers Tool Kit

V.3.1

## Description

The Optronics network installer kit is a must have for anyone who is terminating a copper network. It contains all the essential tools needed for copper installation and is suited to all levels of users; from an apprentice right up to an experienced engineer. The kit contains the OptronicsTools range of high-quality tooling products (contents listed below) giving the user comfort in the knowledge that they are using superior tools with a consistent level of quality and performance.

The tools are packed into their own cut-foam compartments and are presented in a robust, virtually indestructible, yet stylish case. The cases are IP67 rated and are usually used in military applications, therefore, you can be assured that they have been through and passed rigorous testing. Our cases offer the following benefits:

- ▶ **Airtight**
- ▶ **Crush proof**
- ▶ **Shock proof**
- ▶ **Interstackable**
- ▶ **Corrosion proof**
- ▶ **Sand and dust proof**
- ▶ **High thickness body material**
- ▶ **Watertight and waterproof**
- ▶ **Can withstand temperatures between -33 & +90 °C**

The inserts are made from a dense foam which is ideal for protecting any fragile equipment contained in the kit. Routed using a computerised method, the tools fit perfectly in their designated areas with the two-tone effect allowing for easy identification of any missing tools.

In addition to the standard kit, we also offer a customisation programme for those who wish to put their own mark on the product and decide exactly how the contents should be made up (MOQ, price variations and lead times will apply).
